TissueLink Medical Changes Name to Salient Surgical Technologies

DOVER, N.H.--([BUSINESS WIRE](#))--TissueLink Medical, Inc., a privately held medical device company, announced today that the Company has changed its name to Salient Surgical Technologies, Inc. The name change is effective today.

Joe Army, President & CEO of the Company commented: "The name change ensures that our Company will no longer be mistaken for a biologics or tissue bank company. The new name - Salient Surgical Technologies - reflects our focus on delivering surgical products that provide improved clinical and economic value to customers."

About Salient Surgical Technologies, Inc.

Salient Surgical Technologies is a medical technology company that develops and markets surgical products based on its proprietary Transcollation™ technology for the sealing of blood vessels and other collagen-based structures. Transcollation technology integrates saline and radiofrequency energy via saline-induced liquid electrodes that deliver thermal energy to selected tissues and bone. Current applications for the Company's Transcollation technology include reducing blood loss during and after orthopedic hip and knee reconstructions, multi-level spinal fusions and surgical oncology. To date, Transcollation technology has been used in over 165,000 surgical procedures.
